Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 45-47 and 49-51 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hanada et al., U.S. Patent # 5,621,042.

With their amendment, Applicant has actually broadened the claim to the extent that the curing agent can now be an isocyanate compound or an amino compound. Applicant observes that Hanada fails to teach an invention wherein an amino compound is combined with a fluorine-containing resin having a hydroxyl group but, of course, the claims still embrace a permutation where the curing agent comprises an isocyanate group and it is this embodiment on which the rejection had been predicated.

As for the experimental data, Applicant purports that it conveys the "significance" of (not unexpected results associated with) the employment of an amino-functional polysiloxane in combination with the fluororesin and curing agent. However, the Examiner had earlier expressed concerns with the qualitative manner in which the results were reported on page 4 of the March 23, 2009 correspondence and Applicant has not responded to these concerns in any meaningful way.

Allowable Subject Matter

Claims 48 and 52 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
